EXPERIENCE

- | | |
|---------------------|--|
| Mar 2019 - Current | Systems Engineer II
Accruent <ul style="list-style-type: none">• Promoted to Systems Engineer II in 2022 after recognition for outstanding contributions to cloud infrastructure management.• Orchestrated and streamlined multi-cloud environments, ensuring seamless administration within Accruent CloudOps for peak performance and reliability across 4 software products, 4 public clouds, and 5 geo-locations, managing approximately 1,000 servers.• Implemented and maintained highly available, redundant international data centers to facilitate global application deployments using Java and Apache Tomcat, spanning 5-7 environment levels, including production.• Fortified RedHat Linux, CentOS Linux, and Oracle Enterprise Linux systems, prioritizing stability and security.• Executed proactive cybersecurity vulnerability scanning and patching to uphold compliance and shield infrastructure, achieving a record-low RPA score below 7k.• Enhanced application availability and performance by strategically deploying and tuning F5 routing and load-balancing, utilizing HA pools for failover.• Transformed systems administration processes by developing and deploying automation scripts with Bash, Ansible, and Salt, achieving a reduction in task runtimes from days to hours and optimizing scalability and efficiency. |
| Mar 2016 - Feb 2019 | Linux Systems Engineer
MicroAssist <ul style="list-style-type: none">• Orchestrated and executed a solo, full-scale migration of ~50 on-premises Linux servers and applications to the DigitalOcean Cloud.• Engineered and maintained a scalable cloud infrastructure within a Linux-based environment, specializing in RHEL systems, supporting tens of thousands of routine users and a lifetime of approximately 100,000 users.• Pioneered the implementation of network monitoring and logging systems, improving performance and securing the network, and achieving a 300% increase in log diagnosis speed.• Hardened and optimized Apache web servers, amplifying performance and resolving vulnerabilities, and expediting patching by an estimated 400%.• Maintained and streamlined server operations for Moodle LMS, WordPress, Drupal, Redmine, and Jira, achieving consistent performance and compressing build times from days to hours via Bash automation.• Enhanced and secured MariaDB/MySQL databases, bolstering application performance and data integrity, and streamlining responsiveness through isolation strategies.• Audited network configurations with Nmap scripts, documenting ~100 network devices; maintained documentation to ensure compliance with industry security standards.• Employed Nginx for robust proxying and load balancing to construct a scalable system architecture.• Implemented data backup and recovery processes for ~30 Linux servers, with a recovery time objective (RTO) of <2 hours. |

EMT+

[Astreya at Google](#)

- Delivered and maintained critical technical support within a MacOS Google corporate domain, ensuring maximum system and equipment functionality for ~250 Nest call center employees.
- Upheld infrastructure reliability through proactive hardware maintenance, diagnosing, repairing, and upgrading a fleet of roughly 200 Mac workstations.
- Orchestrated operating system and software updates to enforce compliance with Google corporate standards and security protocols.
- Mitigated networking system issues by pinpointing connectivity problems and implementing solutions to minimize downtime.
- Streamlined CAMP inventory management processes for IT assets, guaranteeing accurate tracking and equipment availability.
- Triageed and resolved user support requests via Help Desk ticketing systems, expediting technical solutions to elevate end-user productivity.

Aug 2015 -
May 2016

Adjunct Professor

[Austin Community College](#)

- Prepared comprehensive instruction on Linux and UNIX systems, focusing on practical applications and theoretical concepts.
- Designed and arranged curricula to address diverse student learning needs in alignment with academic standards.
- Facilitated classroom discussions and hands-on labs, enhancing students' technical proficiency with operating system environments.
- Assessed student performance through tailored assignments, exams, and feedback to ensure mastery of subject matter.
- Maintained up-to-date knowledge of industry trends to provide relevant and current course content.
- Promoted a collaborative learning environment by encouraging active participation and peer interaction during lessons.

Feb 2012 -
May 2015

Desktop Technician

[Peniel Solutions](#)

- Sustained and troubleshot a Windows 7 corporate domain environment, ensuring system stability and compliance.
- Pioneered a streamlined update process for all company-approved software, reducing update time and fortifying consistent security protocols.
- Accelerated workstation support, including hardware installation, diagnostics, and repairs, adhering to company protocols.
- Configured network settings and corrected networking issues to guarantee seamless connectivity and user productivity.
- Started mobile device management strategies and secured devices within the corporate infrastructure.
- Optimized backup management processes and refined user support through Help Desk ticketing systems for rapid issue resolution.

Aug 2006 -
Feb 2012

PC Repair and Network Technician

[Freelance](#)

- Conducted operating system maintenance and management to ensure optimal performance and reliability in both commercial and SOHO environments.
- Performed software installation, updates, and troubleshooting to resolve technical issues efficiently.
- Devised networking support, including configuration, optimization, and troubleshooting of connectivity problems.
- Diagnosed and repaired hardware issues to restore functionality across PCs and related devices.
- Enacted preventive measures to maintain the stability and security of systems and networks.
- Advised on best practices for system upgrades and network improvements to meet user needs effectively.
